forward.png	Forward button
forward-hover.png	Forward button (mouse over)
forward-pushed.png	Forward button (mouse click)
home.png	Home Button
home-hover.png	Home Button (mouse over)
home-pushed.png	Home Button (mouse click)
bookmarks.png	Bookmark Button
bookmarks-hover.png	Bookmark Button (mouse over)

bookmarks-pushed.png	Bookmark Button (mouse click)
throbber.png	Loading Icon
persona-header.png	Background Image of Tool bar

## 2. Set Values

Set values	Description
extensions.domova .data	<p>Character lines in JSON which indicate DOMOVA currently applied.</p> <p>Descriptions of each parameter is as follows:  name: creator name of Domova  title: name of Domova  base: base URL (1) of image file  path: base URL (2) of image file  files: arrays of image file names  width: width of image file (default 50px)  height: height of image file (default 50px)</p> <p>The URL of the image file is created by connecting base, path and files. For example, if it has properties of base, path and files as follows:  "base" : "http://domova.mozlabs.jp/",  "path": "list/foo/",  "files": ["back.png", "forward.png", "home.png", "bookmarks.png" ...]</p> <p>The URL of back button is as follows:  <a href="http://domova.mozlabs.jp/list/foo/back.png">http://domova.mozlabs.jp/list/foo/back.png</a></p>

extensions.domova .dir	Path of a folder finally selected in the menu of Domova (local file)
---------------------------	--

### 3. Applying Domova from Website

By making DOM event named ``domova-install`` in a Website, we can apply Domova from the Web page. Sample code is as follows:

[JavaScript]

```
function DomovaWebInstall(button) {  var evt =  
document.createEvent("Events");  evt.initEvent("domova-install", true,  
false);  button.dispatchEvent(evt); }
```

[HTML]

```
<input type=" button" label=" このDomovaを適用" onclick="  
DomovaWebInstall(this);" />
```
